Art Unit: 2838

1. Claims 1-55 are allowed over the cited prior art.
2. The following is an examiner's statement of reasons for allowance: None of the prior art of record disclose or teach a switched capacitor:

Claim 1 with a plurality of connective structures, each selected one of which plurality of connective structures being disposed to connect each selected one of the plurality of semiconductor switches to the one or more selected ones of the plurality of thin-film capacitors while being disposed substantially along one of a plurality of respective axes that are disposed in an orientation that is substantially normal to the first plane,

Claim 20 with a plurality of conducting structures connecting a plurality of respective terminals of the charging and discharging transistors to respective ones of the capacitor electrodes, the conducting structures having an equivalent series resistance of less than 10 milliohms,

Claim 31 by applying an output current from the capacitors through a plurality of discharging transistors on the integrated chip, the discharging transistors arranged in a layout such that a plurality of respective terminals of the respective discharging transistors are disposed above a portion of a plurality of respective electrodes of the plurality of capacitors,

Claim 32 with a controller operatively connected to all of the transistors, the controller operative to switch the transistors between a first charging mode in which all of the P4 and P5 transistors in the phase are de-activated, and a second discharging mode in which all of the P1 and P2 transistors in the phases are de-activated,

Claim 42 a method in response to a higher desired voltage at a substantially constant load current, allocating at least one additional switched-capacitor phase to the load or removing an at least one capacitor block from at least one of the switched-capacitor phases, in response to a lower desired voltage at a substantially constant load current, de-allocating at least one of the switched-capacitor phases or adding at least one capacitor block to an at least one switched capacitor phase,

Claim 45 a method in which after de-activating the P1 and P2 transistors in each phase, activating a P3 transistor connecting a negative terminal of each of the capacitors to ground; and after activating the P3 transistors, activating a P4 transistor connecting a negative terminal of each of the capacitors to ground and activating a P5 transistor connecting the positive terminal of at least one of the capacitors to an output terminal and

Claim 48 with a control stage operatively connected to all of the switches, the control stage operative to activate and de-activate selected ones of the switches of a selected phase to change between a first charging mode and a second discharging mode, the control stage operative to activate selected ones of the voltage-shifting switches of the selected phase prior to activating selected ones of the second discharging switches switches.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
